## 4k video player for android phone

When it comes to professional-grade video and photo apps on Android, there is a scarcity and notable gap with the iPhone.Many will do it with heavy requirements for those apps and developers having a much easier time optimizing such apps for only one device, an architecture and a rich set of camera APIs on the iPhone. Apps like FiLMiC Pro have been considering iOS movie makers enthusiasts great tools for professional video looking. An app on Android aims to provide a similar level of creative freedom: it's called 4K Cinema and it comes with the promise of flat video profiles (a great starting movie for color grading) and up, up to 200Mbps bit rates. You can also lock exposure and focus easily and have a few more neat options, but the issue with 4K cinema is that it sometimes works and sometimes it doesn't. It depends on the phone, the software version and a ton of other factors. The free version of the Cinema 4K app serves like a trial that allows you to record video for up to a minute, but that should be good enough to let you know how well the app works on your device. And if it does, it should definitely be on your wish list if you care about creating better looking videos. Download Cinema 4K on Android (Google Play Link Store) Subscribe to our newsletter! Qualcomm says the Snapdragon 800 can do 4K HD video just the other day, we told you about a phone claimed to be prepared by LG as one of several devices that Google is looking for Nexus's next smartphone. The profile that accompanied the rumor was very outrageous and included a 4K UltraHD video recording on the 16MP camera. A lot of people looked at it and immediately stamped everything on being a fabrication. But the truth is, ultraHD 4K video will apparently be on some Android devices before the end of the year. At CES and MWC, Qualcomm showed off the recording capabilities of its Qualcomm Snapdragon 800 4K UltraHD chip and had previously announced it would be on commercial devices by mid-2013. For those unaware, the 4K UltraHD video offers a resolution of four times that of 1080p which is considered a full HD screen. That works out to 4096 x 2304.So you may also choose another alleged profile belonging to megalotron LG to contact everything fake, because we could well see ultrahd 4K video sometime later this year.Source:Qualcomm Subscribed to our newsletter! Gone are the days when watching movies requires a TV cassette and video or DVD player. Today, video streaming services like Netflixers, Hulu, or Amazon Prime have taken over in a big way. Plus, better video formats and storage solutions have emerged, and many smartphones now shoot 4K video so you can turn your mobile device into a portable theater. If your device's stock video player doesn't play high-quality videos correctly, there are several Android video player apps you can replace with. These video streaming apps allow you to get the features you need, and experience viewing your video increase. I'm sorry, I'm Android Video Players AllCast AllCast is an Android video streaming app that works with streaming devices such as Chrome Cast, Apple TV, Rocco, X with One/360, WDTV, and other DLNA-compatible renderings. The app allows you to stream content from your phone to a TV, monitor or other larger screen instead of playing it on your small smartphone screen. You can use AllCast to stream other types of media such as your photos and music from local storage or cloud storage. AllCast is available as a free app, with a five-minute limit on content. If you want to remove the restrictions, you can buy the premium key for \$4.99 and enjoy watching videos on your phone. MX Player If you want the right balance of powerful features and ease of use, MX Player is worth considering. The Android video streaming app supports more formats and offers features such as accelerated hardware playback and hardware decoding. The viewer is simple and sloppy with support for pinch to zoom and various swipe gestures, subtitle gestures, multi-core decoding, and variable aspect ratios. MX Player also locks kids to keep their kids from watching anything inappropriate content. You can use free MX Player or upgrade to pro version for \$5.99. VLC for Android VLC for Android is a complete media player that can play any video and audio files, network and stock drives, network streams, and ISOs DVDs. The program has a slew of features including equals and filters. VLC also supports all video formats and codecs including MOV, AVI, MP4, MKV, FLAC, Ogg, AAC, TS, Wv, and M2TS. Plus, the app supports closed subtitles, subtitles, Teletext, multi-track audio, auto-rotation, and gestures to control brightness, volume, and looking. You can also stream a video from a URL. LocalCast LocalCast is a free Android video streaming app that allows you to stream videos, photos, and music to devices like Chromecast, Apple TV, Roku, and FireWood. The program allows for the flow of your device's local storage or from cloud storage. Plus, it supports streaming of links and from most DLNA-compatible devices. If you don't like all the ads in the free version, you can upgrade to the Pro version and open features like local media search and video preview. Networking If you have a lot of videos on your Android device and limited storage, the network is a very good video player app to use. You can set up a server on your PC, and use the network to stream content to your mobile device, thereby turning your device into a streaming powerhouse. The app also sorts your media files in a library so you can stream to your smart TV or mobile device. The network is free to set up and use, but you can pass on to Plex subscriptions and access features such as wireless sync, media control dashboard, And user control is upgraded. BSPlayer is the BSPlayer game app's most popular video format, and supports streaming of DLNA devices. The video streaming app features accelerated hardware playback, software and multi-core hardware decoding, E, Supports subtitles, and can play files from compressed formats. Not only that, but BSPlayer also offers swipe gesture support, and you can customize the interface using a variety of skins. You can also use the pop out viewer to watch videos in a window higher than other apps on your device. The free version supports the app but you can access all the features. The full version of No Ads offers added functionality including chromecast support, multiple audio streams and subtitles, and screen locks (baby locks). Full-format video playback (XPlayer) is a basic Android video player app with 4K playback ability, ultraHD, extended format support, and Chromecast support, gesture control. Featuring useful extras such as variable speed playback control from .25x to 4x, night mode, and gesture control. You can also create a video playlist and add your favorite videos to it, pinch to zoom in, find and delete videos files, or edit them using video cutters. If you have a multitasking, you can watch videos in a pop-up window, or play movies in the background while you're doing something else. It supports the extension, but for only \$3.99 you can open the ad-free version and view your videos without any distractions. Kodi Kodi is a popular video streaming app loaded with features to help you turn your Android device into a portable media hub. The app doesn't contain any content, but you can access videos from your local storage, or from cloud storage. Plus, Cody allows you to access content available on the content provider's site using third-party plugins or add-ons such as YouTube, PopcornFlix, Crackle and more. Make sure you protect your privacy using a virtual private network (VPN). VPN encrypts your data so that online snoops and hackers can't steal your personal information. Enhance your video viewing experience with the appropriate Android video player app, you have to worry about downloading more plugins or codec to enjoy your favorite TV shows, music, or videos. These 8 video player programs eliminate all hassles and go right down to broadcast your videos. Is your favorite Android video player app to list? Tell us about this in comments. If you have local videos stored on your Android phone, there is no shortage of ways to give them an hour. But that doesn't mean that all options are created equally—these are the best video apps for Android. Before we get into it though, we need to make it clear that these programs are saved to watch local movies. They are not for streaming services like YouTube or Netflix. It's all about watching videos stored on your phone, regardless of whether you shot them with your camera or downloaded them from somewhere. Best overall: VLC for Android (free) when it comes to video players on almost any platform Come, it's hard not to consider VLC. It's open source, free, and can play almost any type of video file you'd like to throw at it. All that combination makes VLC an easy choice Best player on Android. VLC also offers compatibility with subtitles and package descriptions, as well as a media library, folder support, multi-track audio, aspect ratio setting, and widget. It can also stream videos on your local network. Not only is it a great video player, it's also an all-featured audio player with an EQ and supports basically any audio format out there. And it does it all for free. Just download it now. Best for camera video shot: Google Photos (free) If all you're looking to do is watch the movie again you took with your phone's camera, then Google Photos is the walk. It is now a powerful tool for all your photos and backup needs, but it's also great to watch videos — and even small edits. With photos, you can watch all the videos lve shot with your camera (and many others that are stored locally on your device, though supported file formats are limited), share them directly with other apps, and trim or cut clips if needed. It's a simple, but useful tool and one that you'll probably already have on your phone. If not, however, it's in the free game store. Best for casting videos: LocalCast (free, different IAP) watch videos on your phone cool and all, but it's also nice to use a much larger screen in your living room. It's a huge part of what makes Google's Chrome Cast such a good thing, and LocalCast is the best app for a solid casting experience. Related: What's the best way to cast videos from Android or iPhone to your TV what makes it better than other apps? It has the best device support: it not only supports Chrome Cast, but also Apple TV, fire TV, Sony and Samsung smart TVs, X-360/1, and all other DLNA devices. It's too much. LocalCast also has features that support cloud streaming, so you don't have to keep content stored on your device—you can connect the drive and drop-up to LocalCast for remote streaming. LocalCast is free to try, but using pay what you want model with a variety of options, including \$0.99 a month, monthly payment plans of \$5.50, \$6.88, \$10.67, or \$21.30. There are also a couple of one-time payment options: \$4.92 or \$6.57. You can take it a shot by downloading it here. here.
